who is mohammad nashid

Mohammad Nashid, also known as Moe Nashid, is a tech professional who has been actively promoting software development and cloud computing since he was a teenager. He has a vast knowledge in both areas and has been recognized as a pioneer in the industry. His expertise in DevOps, cloud infrastructure, and software development tools has earned him a reputation as a go-to resource for individuals and organizations alike. In addition to his technical expertise, Moe Nashid has a strong interest in personal growth and spirituality. He has spoken publicly about his journey to find meaning and purpose in his life, and he often uses his platform to inspire others to do the same. He is also actively involved in charitable causes and has helped many individuals and organizations in need. Overall, Moe Nashid is a role model for aspiring software engineers, cloud architects, and entrepreneurs alike, who seek to create a better world through technology.

About DocMind

DocMind is an intelligent document question-answering system built using **Retrieval-Augmented Generation (RAG)**. It allows users to upload PDF documents and interact with them using natural language questions. Instead of manually searching through lengthy documents, DocMind retrieves relevant sections and generates accurate, context-aware answers.

The system works by extracting text from uploaded PDFs and dividing the content into smaller chunks. These chunks are converted into **vector embeddings** and stored in a vector database. When a user asks a question, the system searches for the most relevant pieces of information, which are then provided as context to a large language model.

This approach ensures answers are **grounded in the document itself**, enabling efficient knowledge retrieval and improving how users interact with large amounts of textual information.

How It Works

Upload

PDF is uploaded and text is extracted from all pages

Chunk

Text is split into overlapping chunks for better context coverage

Embed

Each chunk is transformed into a vector embedding using Sentence Transformers

Search

Your question is embedded and matched against stored vectors via FAISS

Generate

Top chunks are passed to Llama 3 via Ollama to generate a precise answer

Purpose

DocMind demonstrates how modern AI systems can combine information retrieval with large language models to create powerful document-analysis tools. It can be applied in research, education, knowledge management, and document exploration — helping users quickly find answers within large documents.

Author

Sheikh Mohannad Nashid

AI, DevOps & Technology Enthusiast

DocMind was developed as part of a personal exploration into artificial intelligence, retrieval systems, DevOps practices, and modern web technologies.
